

**Green Chemistry
Education Webinar Series**

**Chemical Hazard Assessment:
Informing Decisions for Safer
Chemicals, Materials, and Products**

November 10th, 2015

What is the GC3?

- Cross-sectoral, B2B network of over 70 companies and other organizations
- Formed in 2005
- Collaboratively advances green chemistry across sectors and supply chains

Today's Speakers

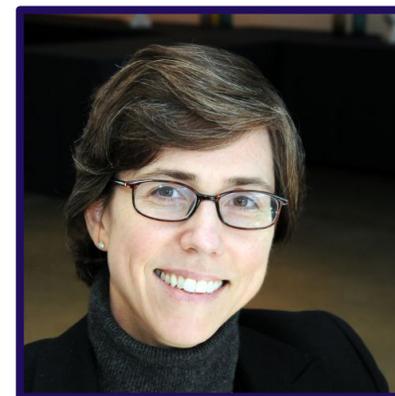

Lauren Heine

Interim Executive Director
Northwest Green Chemistry

Margaret Whittaker

Managing Director and Chief Toxicologist
ToxServices, LLC

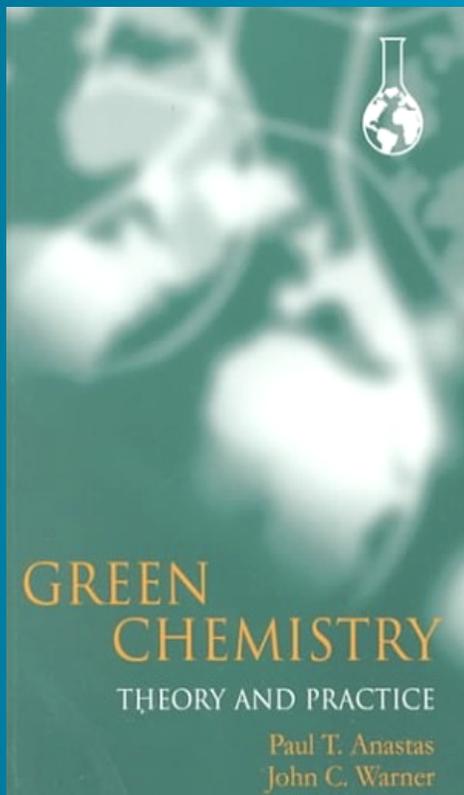

Ground Rules

- Due to the number of participants in the webinar, all lines will be muted
- If you have a question or comment, please type in the Q&A box located in the control panel at the right of your screen
- Questions will be answered at the end of the presentation

Webinar Agenda

- Provide an overview of Hazard and GHS
- How are CHAs performed?
- How do CHAs support informed decision making?
- How can I incorporate CHA into my company's decision making process?
- Examples and CHA-related resources

Key Concept to Selecting Safer Chemicals: Reduce Risk by Reducing Inherent Hazard

$$\text{Risk} = f(\text{Hazard, Exposure})$$

Green Chemistry Pocket Guide

The 12 Principles of Green Chemistry

Provides a framework for learning about green chemistry and designing or improving materials, products, processes and systems.

1. Prevent waste
2. Atom Economy
3. Less Hazardous Synthesis
4. Design Benign Chemicals
5. Benign Solvents & Auxiliaries
6. Design for Energy Efficiency
7. Use of Renewable Feedstocks
8. Reduce Derivatives
9. Catalysis (vs. Stoichiometric)
10. Design for Degradation
11. Real-Time Analysis for Pollution Prevention
12. Inherently Benign Chemistry for Accident Prevention

www.acs.org/greenchemistry

 ACS
Chemistry for Life[®]

 ACS
Green Chemistry
Institute[®]

Green chemistry is defined as “the design of products and processes that reduce or eliminate the use or generation of hazardous substances.”

*Anastas, P. T. and J.C. Warner. 1998. Green Chemistry: Theory and Practice, Oxford University Press

Key Concept to Selecting Safer Chemicals: Reduce **Risk** by Reducing Inherent **Hazard**

Green Chemistry Principles

Number	Hazard-based principles are BOLDED
1	Prevent waste
2	Atom economy
3	Less hazardous chemical syntheses*
4	Design safer chemicals and products*
5	Use safer solvents and auxiliaries*
6	Design for energy efficiency
7	Use of renewable raw materials/feedstocks
8	Reduce derivatives
9	Use catalytic reagents not stoichiometric reagents
10	Design chemicals and products to degrade after use*
11	Analyze in real-time for pollution prevention
12	Minimize the potential for accidents through safer process chemical selection*

What is Hazard?

Hazard = the *inherent property* of a substance having the potential to cause adverse effects when an organism, system, or (sub) population is exposed to that substance.

Risk = the *probability* of an adverse effect in an organism, system, or (sub) population under specified circumstances by exposure to a substance.

One pound lemon: Moderate hazard (from acetic acid and d-limonene), Low risk (in unpeeled form)

$$\text{Risk} = f(\text{Hazard} \times \text{Exposure})$$

What are Categories of Hazards?

- CMR
 - Carcinogen
 - Mutagen
 - Reproductive or Developmental toxins
- PBT
 - Persistent
 - Bioaccumulative
 - Toxic
- Endocrine disruption/activity
- Other human health endpoints
 - Acute toxicity
 - Systemic toxicity
 - Skin sensitization and irritation
 - Respiratory sensitization
- Aquatic toxicity
- Terrestrial toxicity
- Physical hazards
 - Reactivity
 - Flammability

What Are Chemical Hazard Assessments?

A Chemical Hazard Assessment is a critical component of a Chemical Alternatives Assessment (CAA)

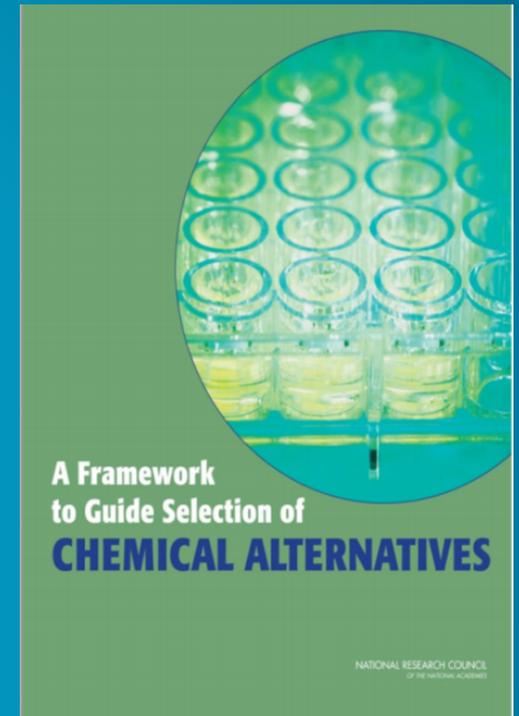

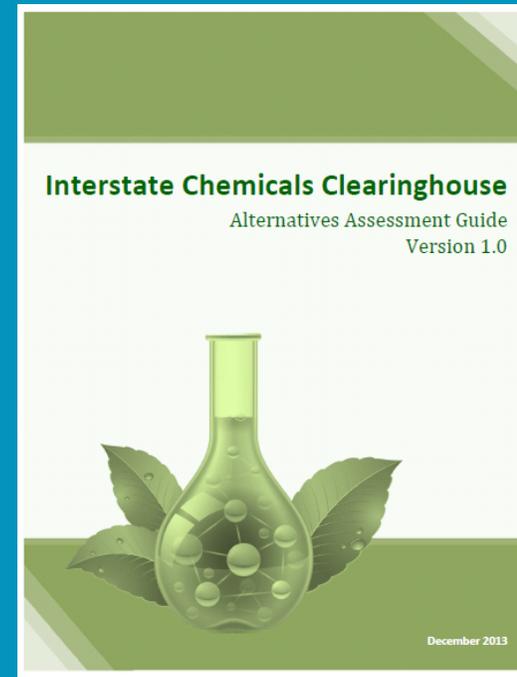

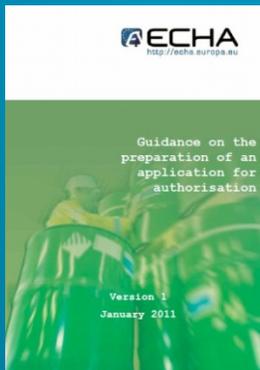

- A CHA can be performed as part or independently of a full CAA

The Six Steps of a CAA are shown below:

- **Chemical hazard assessment (CHA):** a systematic process of assessing and classifying hazards across an entire spectrum of endpoints and severity
- Life cycle thinking
- Exposure assessment
- Technical/functional assessment
- Economic assessment
- Social impact assessment

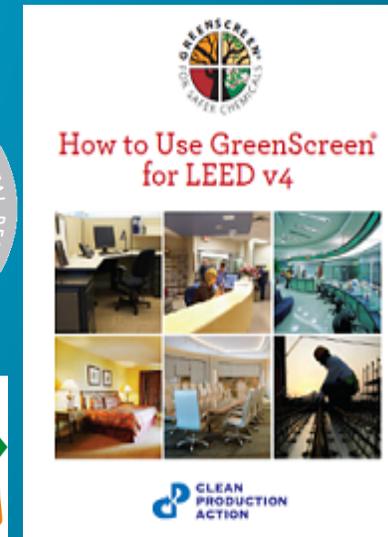

Chemical Alternatives Assessments

- Chemical Alternatives Assessments focus on finding alternative chemicals, materials and/or product designs to substitute for the use of hazardous chemicals
- When properly conducted, an alternatives assessment provides the means to avoid **regrettable substitution**, and promotes the selection of safer chemicals or materials

Examples of Chemical Hazard Assessments

<p>Alternatives Assessment</p>	<p>BizNGO's Alternatives to Methylene Chloride in Paint Strippers Report to meet Stage 1 of California Safer Consumer Products Regulations http://www.bizngo.org/news/article/methylene-alternatives-assessment-new-report-webinar</p> <p>State of Washington's Pilot Using the IC2 Alternatives Assessment Guide to Evaluate Alternatives to Copper-Based Boat Paint: http://theic2.org/</p>
<p>Materials Procurement</p>	<p>Identify chemicals of concern and safer alternatives</p> <ul style="list-style-type: none"> ZDHC members use chemical hazard assessments to select safer chemicals in textile formulations: www.roadmaptozero.com
<p>Product Development</p>	<p>Inform development for new chemicals and formulations</p> <ul style="list-style-type: none"> GC3 project evaluated alternatives to known toxic phthalate plasticizers in wire & cable applications http://www.greenchemistryandcommerce.org/projects/business-and-academic-partnerships-for-safer-chemicals
<p>Corporate Policies, Reporting and Management Systems</p>	<p>Track progress in managing chemical inventories. See sustainability reports by HP and Nike.</p>

Decisions Empowered by Alternatives Assessment/Chemical Hazard Assessment vs. Risk Assessment

Alternatives assessments and chemical hazard assessments are intended to answer the question “Which chemical or product poses a lower hazard?”

A **risk assessment** is designed to answer the question “Is this chemical or product safe enough for the intended use?”

CHA or CAA

Enable prioritization of chemicals for reduction or phase-out

Assist in the selection of alternative chemicals or technologies for:

Compare and contrast chemicals

Inform prioritization of chemicals for reduction/phase-out

Estimating probability of harm following exposure

For contaminated sites, identifying acceptable levels of remediation

Banned or restricted chemicals or materials

Chemicals that are perceived as hazardous by the public

Developing environmentally preferred products

Identifying and classifying Restricted Use Substances

Risk Assessment

Chemical Hazard Assessment

From Most Data/Resource/Expertise Intensive to Least

1. GreenScreen for Safer Chemicals® (“Full GreenScreen”) and DfE Alternatives Assessment Criteria for Hazard Evaluation

- Based significantly on Globally Harmonized System (GHS)
- Includes evaluation of 18 hazard endpoints
- Comprehensive review of all available data
- Comprehensive assessments needed for identifying safer alternatives

2. Quick Chemical Assessment Tool (QCAT)

- Includes evaluation of 9 hazard endpoints (GreenScreen subset)
- Reviews all data sources in the GreenScreen® List Translator
- Reviews a sub-set of measured and estimated data

3. GreenScreen List Translator™

- Reviews list-based data sources only
- Quickly identifies chemicals to avoid and why
- Easily accessible tool that can be automated

GHS: A Solid Base for CHA

GHS: The **Purple Book** of Hazard Classification

- GHS is the Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

What is GHS?

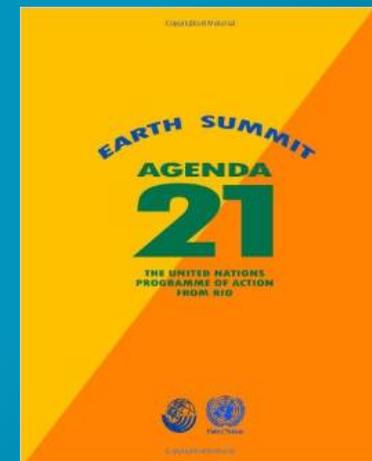

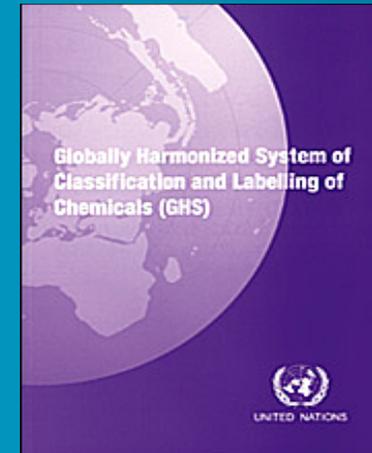

- GHS specifies criteria for the classification of health, physical and environmental hazards
- GHS specifies information to include on labels of hazardous chemicals and safety data sheets

Why was GHS developed?

- The UN developed GHS to promote a worldwide standard for hazard classification and communication
- GHS was born out of the UN's 1992 Earth Summit and was written up as Chapter 19 of the Earth Summit report: Agenda 21

Does every country in the world adhere to GHS?

- **No.** GHS is not required and participating countries are allowed to adopt only portions of it.
- 67 Countries have adopted GHS as of November, 2015

GHS: A Solid Base for CHA

- GHS is built on 16 physical, 10 health and 3 environmental hazard classes
- GHS comprises the following communication elements
 - 9 Pictograms
 - 2 Signal words "Danger" or "Warning"
 - 72 individual and 17 combined Hazard statements
 - 116 individual and 33 combined Precautionary statements

Limitations of GHS

- GHS has no discrete hazard classification criteria for Persistence
- GHS has no discrete hazard classification criteria for Bioaccumulation
- GHS has no discrete hazard classification criteria for Endocrine Disruption
- GHS Category 1 toxicity for acute and chronic aquatic toxicity do not differentiate between very toxic and extremely toxic substances like biocides (pesticides, antimicrobials)
- GHS does not address additional species (e.g., birds, bees)

Chemical A

Ecotox		Fate		Physical	
AA	CA	P	B	Rx	F
vH	H	L	vL	H	L

(vH) in *italics* reflect values based on test data

Chemical B

Ecotox		Fate		Physical	
AA	CA	P	B	Rx	F
vH	H	L	vL	H	L

(vH) in *italics* reflect values based on test data

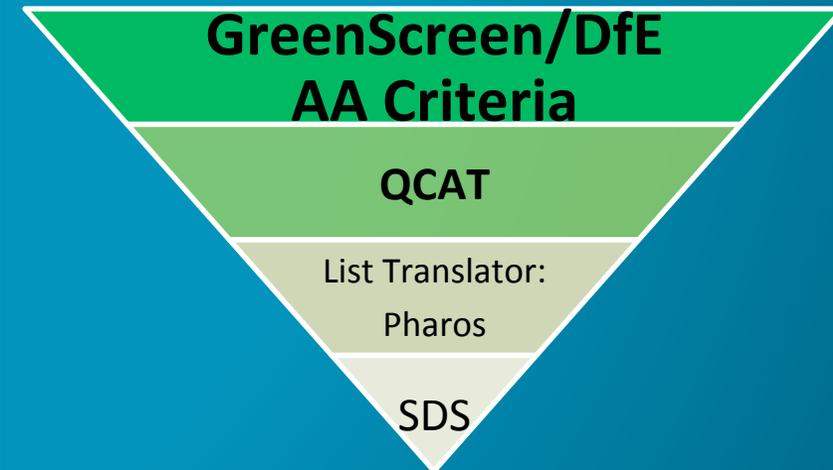

- The hazard tables appear the same for two different chemicals (A and B) but high acute aquatic (AA) toxicity could be orders of magnitude different at current highest toxicity classification level (GHS Category 1 for acute aquatic toxicity covers values less than 1 mg/L)
 - e.g., vH Fish or Daphnia toxicity: LC_{50} or $EC_{50} = 0.9$ mg/L versus 0.0009 mg/L

Endpoints Assessed in Chemical Hazard Assessment

Chemical Hazard Assessment (CHA) methods typically share common hazard endpoints relating to human toxicity, environmental toxicity, and environmental fate

- CHA tools have varying degrees of complexity

GreenScreen® Hazard Ratings																			
Group I Human					Group II and II* Human								Ecotox		Fate		Physical		
Carcinogenicity	Mutagenicity	Reproductive Toxicity	Developmental Toxicity	Endocrine Activity	Acute Toxicity	Systemic Toxicity		Neurotoxicity		Skin Sensitization*	Respiratory Sensitization*	Skin Irritation	Eye Irritation	Acute Aquatic Toxicity	Chronic Aquatic Toxicity	Persistence	Bioaccumulation	Reactivity	Flammability
						single	repeated*	single	repeated*	*	*								
L	L	L	M	M	L	L	L	vH	H	L	DG	L	L	H	H	vL	L	M	L

Endpoints Assessed in Chemical Hazard Assessment

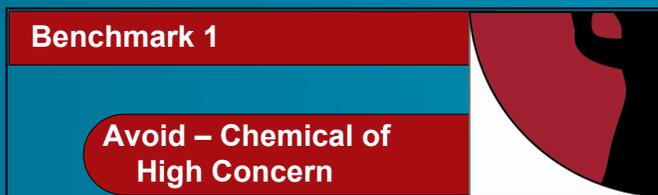

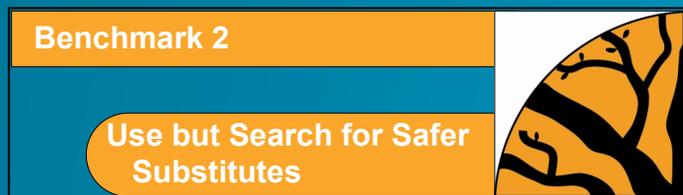

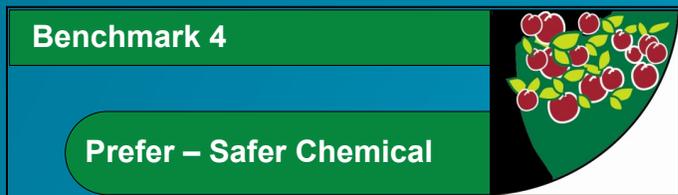

Ideally, A CHA should evaluate human health, ecotoxicity, fate, and physical hazards

Hazard Summary Table Supplier A Chemicals [REDACTED]

CHA Tool #1: GreenScreen® for Safer Chemicals

GreenScreen® hazard-based continuum

A GreenScreen® can identify known “bad actor” chemicals

A GreenScreen® can rank chemicals

To prioritize chemicals for further review and/or phase out

To select more preferable chemicals

BENCHMARKS 1-4 = GreenScreen® Decision Logic

Benchmark U =
Undetermined due to
insufficient data

Aligned with Regulatory Drivers

Enhanced CHA Hazard Table: Route of Exposure

Nonstratified
GreenScreen

Figure 1: GreenScreen™ Hazard Ratings for Terephthalic Acid

Group I Human					Group II and II* Human								Ecotox		Fate		Physical		
C	M	R	D	E	AT	ST		N		SnS*	SnR*	IrS	IrE	AA	CA	P	B	Rx	F
						single	repeated*	single	repeated*										
<i>M</i>	<i>L</i>	<i>L</i>	<i>M</i>	DG	<i>L</i>	H	<i>L</i>	DG	<i>L</i>	<i>L</i>	DG	<i>L</i>	<i>M</i>	<i>L</i>	<i>L</i>	<i>vL</i>	<i>vL</i>	<i>M</i>	<i>L</i>

Note: Hazard levels in *italics* reflect estimated values and lower confidence. Hazard levels in **BOLD** font reflect

vs.

Stratified
GreenScreen

Figure 1: GreenScreen™ Hazard Ratings for Potassium Permanganate

Route of Exposure	Group I Human					Group II and II* Human								Ecotox		Fate		Physical		
	C	M	R	D	E	AT	ST		N		SnS*	SnR*	IrS	IrE	AA	CA	P	B	Rx	F
							single	repeated*	single	repeated*										
Inhalation	<i>L</i>	<i>L</i>	<i>M</i>	<i>M</i>	<i>M</i>	DG	DG	<i>M</i>	DG	H	<i>L</i>	DG	vH	vH	vH	H	<i>L</i>	<i>vL</i>	H	<i>L</i>
Oral	<i>L</i>	<i>L</i>	<i>M</i>	H	<i>M</i>	<i>M</i>	vH	<i>M</i>	DG	H	<i>L</i>	DG	vH	vH	vH	H	<i>L</i>	<i>vL</i>	H	<i>L</i>
Dermal	<i>L</i>	<i>L</i>	<i>L</i>	<i>M</i>	<i>M</i>	<i>L</i>	H	<i>M</i>	DG	DG	<i>L</i>	DG	vH	vH	vH	H	<i>L</i>	<i>vL</i>	H	<i>L</i>

Note: Hazard levels (Very High (vH), High (H), Moderate (M), Low (L), Very Low (vL)) in *italics* reflect estimated values and lower confidence. Hazard levels in **BOLD** font reflect values based on test data (See Guidance). Please see Appendix A for a glossary of hazard acronyms.

By presenting only the lowest and/or ONLY score for a number of these hazards and fate properties, a nonstratified GreenScreen may mask relevant data gaps

CHA Tool #2: Quick Chemical Assessment Tool (QCAT)

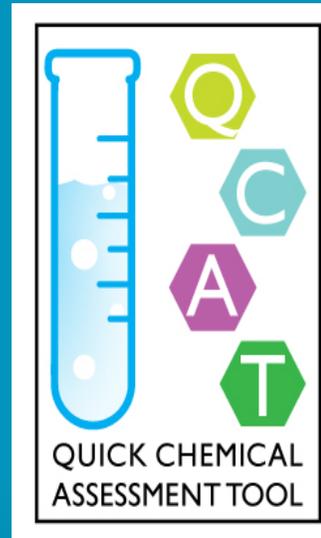

The screenshot shows the Washington Department of Ecology website. The header includes the department logo and name, a search bar with a 'GO' button, and navigation links for 'A-Z Index' and 'Contact Us'. A secondary navigation bar lists various categories: Home, WATER, AIR, WASTE, CLEANUP, TOXIC HAZARDS, and GREEN. Below this, a third bar lists specific services: Programs, Services, Publications & Forms, Databases, Laws & Rules, Public Involvement Calendar, and Public Records. The main content area is titled 'Pollution Prevention' and features a breadcrumb trail: 'Hazardous Waste > Pollution Prevention > Assessing the Safety of Chemical Alternatives > Quick Chemical Assessment Tool'. The page title is 'The Quick Chemical Assessment Tool'. The main text describes QCAT as a simplified assessment tool for evaluating hazards of chemical alternatives, developed by Ecology for small and medium businesses. It notes that QCAT is not a replacement for more thorough methods like GreenScreen™ but serves as an introduction. The text explains that QCAT is based on GreenScreen™ methodology but is less complete and more user-friendly. It states that QCAT includes detailed information on data sources and interpretation, and that a copy of QCAT can be found [here](#). It also recommends reporting QCAT results in an approved format, with a blank copy available [here](#) and a completed example [here](#). A left-hand sidebar contains a 'HWTR HOME' section and a 'Pollution Prevention' section with various sub-links like 'Defining Pollution Prevention', 'Pollution Prevention Planning Program', 'Pollution Prevention by Business Type', 'Pollution Prevention Tools', 'Pollution Prevention Successes', 'Pollution Prevention Resources for Schools and Labs', 'Events and Training', 'Safer Chemical Alternatives', and 'Alternative Assessment'.

QCAT is available on web: <http://www.ecy.wa.gov/GreenChemistry/QCAT.html>

Quick Chemical Assessment Tool (QCAT), version 1.3

- QCAT was developed by the Washington State Dept. of Ecology as a tool for small/medium businesses with limited resources and expertise
- QCAT evaluates 9 hazard endpoints
- QCAT is a two step process
 - Step One: Hazard classification for each of nine hazard endpoints
 - List search (equal to GreenScreen List Translator™)
 - Check for experimental/modeling data if list-based hazard classification is not found for the endpoint assessed
 - Step Two: Chemical grading
 - Initial grade, ignoring data gaps (from A-F)
 - Data gap grade
 - Assigned a QCAT grade for the assessed chemical by selecting the lower of the Initial or Data gap grade

Grade Levels from the QCAT Assessment Process

Grade A	Few concerns, i.e., safer chemical	Preferable
Grade B	Slight concern	Improvement possible
Grade C	Moderate concern	Use but search for safer
Grade F	High concern	Avoid

Populate QCAT Matrix with Hazard Classifications for Chemical Being Evaluated

QCAT evaluates 9 hazard endpoints (shaded below) vs. 18 endpoints in a GreenScreen

QCAT Hazard Ratings																	
Group I Human					Group II and II* Human							Ecotox		Fate		Physical	
Carcinogenicity	Mutagenicity	Reproductive Toxicity	Developmental Toxicity	Endocrine Activity	Acute Toxicity	Systemic Toxicity	Neurotoxicity	Skin Sensitization	Respiratory Sensitization	Skin Irritation	Eye Irritation	Acute Aquatic Toxicity	Chronic Aquatic Toxicity	Persistence	Bioaccumulation	Reactivity	Flammability
L	L	L	M	DG	L	X	X	X	X	X	X	H	X	vL	vH	X	X

Level of Concern:

- vH = very High
- H = High
- M = Moderate
- L = Low
- vL = very Low
- DG = Data Gap
- X = GS[®] criteria not used in QCAT

QCAT Tool

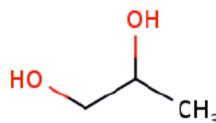

• Positives and negatives

- Part of an alternatives assessment (AA)
- Simpler and easier to implement than a full GreenScreen
- Fewer regrettable substitutions
- Not as complete as detailed AA/CHA
- Less confidence that alternative is truly 'green'
- Introduces companies to the AA process

A QCAT for propylene glycol shows that data were found for all hazard endpoints except endocrine activity. An overall grade of B was assigned.

Propylene glycol QCAT is accessible at <http://theic2.org/>

Chemical Structure:

Hazard Summary Table:

Human - Group 1					Human - Group 2						Eco			Fate		Physical		
C	M	R	D	E	AT	ST	N	SnS	SnR	Irs	IrE	AA	CA	Eo	P	B	Ex	F
L	L	L	L	DG	M	X	X	X	X	X	X	L	X	X	L	VL	X	X

Note: Please see Appendix A for glossary of hazard endpoint acronyms. Grey boxes with an 'X' are criteria included in GreenScreen but not reviewed in QCAT.

B	Initial Grade
B	Final Grade (data gaps)

Grade Levels from the QCAT Assessment Process

Grade A	Few concerns, i.e., safer chemical	Preferable
Grade B	Slight concern	Improvement possible
Grade C	Moderate concern	Use but search for safer
Grade F	High concern	Avoid

CHA Tool #3: The GreenScreen® List Translator

GreenScreen® List Translator

- Readily identifies chemicals of concern
- Based on authoritative lists
- Doesn't require toxicology expertise
- Used to identify GreenScreen® Benchmark 1 Chemicals
 - LT-1 chemicals are Benchmark 1 chemicals (unless proven otherwise)
 - LT-P1 chemicals may be Benchmark 1 chemicals
 - LT-U chemicals are not known to be Benchmark 1 need further assessment to determine Benchmark score

Obtaining GreenScreen® List Translator

Manual Version: <http://http://www.greenscreenchemicals.org/method/greenscreen-list-translator>

Automated Tool: Incorporated into Pharos
<http://www.pharosproject.net/>

The screenshot displays the Pharos project website interface for the chemical [106-46-7] 1,4-DICHLOROBENZENE. The page is titled "Pharos" and includes navigation links for Building Products, Chemicals and Materials, Certifications, Dashboard, and Logout. The main content area shows the chemical name and a list of hazards categorized by severity and type. The hazards listed are:

- CANCER** (Red): US NIH - Report on Carcinogens - Reasonably Anticipated to be Human (Carcinogen) (+10)
- REPRODUCTIVE** (Red): Japan - GHS - Toxic to reproduction - Category 1B
- MAMMALIAN** (Orange): Japan - GHS - Specific target organs/systemic toxicity following repeated exposure - Category 1 (+3)
- SKIN SENSITIZE** (Orange): Japan - GHS - Skin sensitizer - Category 1
- ACUTE AQUATIC** (Orange): EU - GHS (H-Statements) - H400 - Very toxic to aquatic life (+5)
- CHRON AQUATIC** (Orange): EU - GHS (H-Statements) - H410 - Very toxic to aquatic life with long lasting effects (+2)
- EYE IRRITATION** (Yellow): EU - GHS (H-Statements) - H319 - Causes serious eye irritation (+3)
- SKIN IRRITATION** (Yellow): New Zealand - GHS - 6.3A - Irritating to the skin
- ORGAN TOXICANT** (Yellow): New Zealand - GHS - 6.9B (inhalation) - Harmful to human target organs or systems

On the right side of the page, there is a section for "My Project Lists" which states: "No project lists available. Lists can be added to existing projects on your account. Visit your dashboard for more information."

1,4-Dichlorobenzene is a List Translator-1 (LT-1) Chemical

Making Informed Decisions

- Consider the chemical's specific application & use
- Use the full GreenScreen[®] hazard table, not just the Benchmark score
 - e.g., a BM 3 chemical (a very good CHA score) having moderate or high eye irritation would not be a good choice for an eye wash!!
- Apply Risk Management
 - Risk management can be defined as the process of identifying, selecting and implementing actions to reduce risk to human health and ecosystems

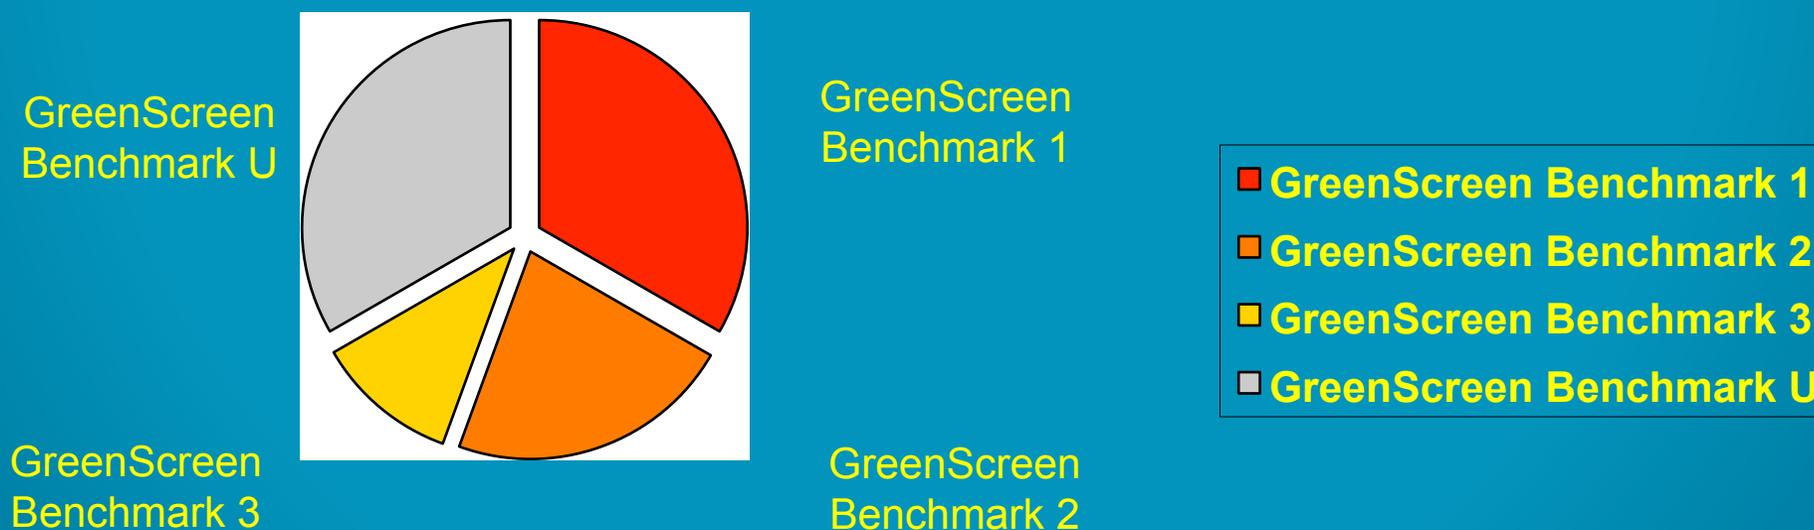

All Chemicals Need Risk Management, but it's a lot easier with inherently safer chemicals...

Making Informed Decisions

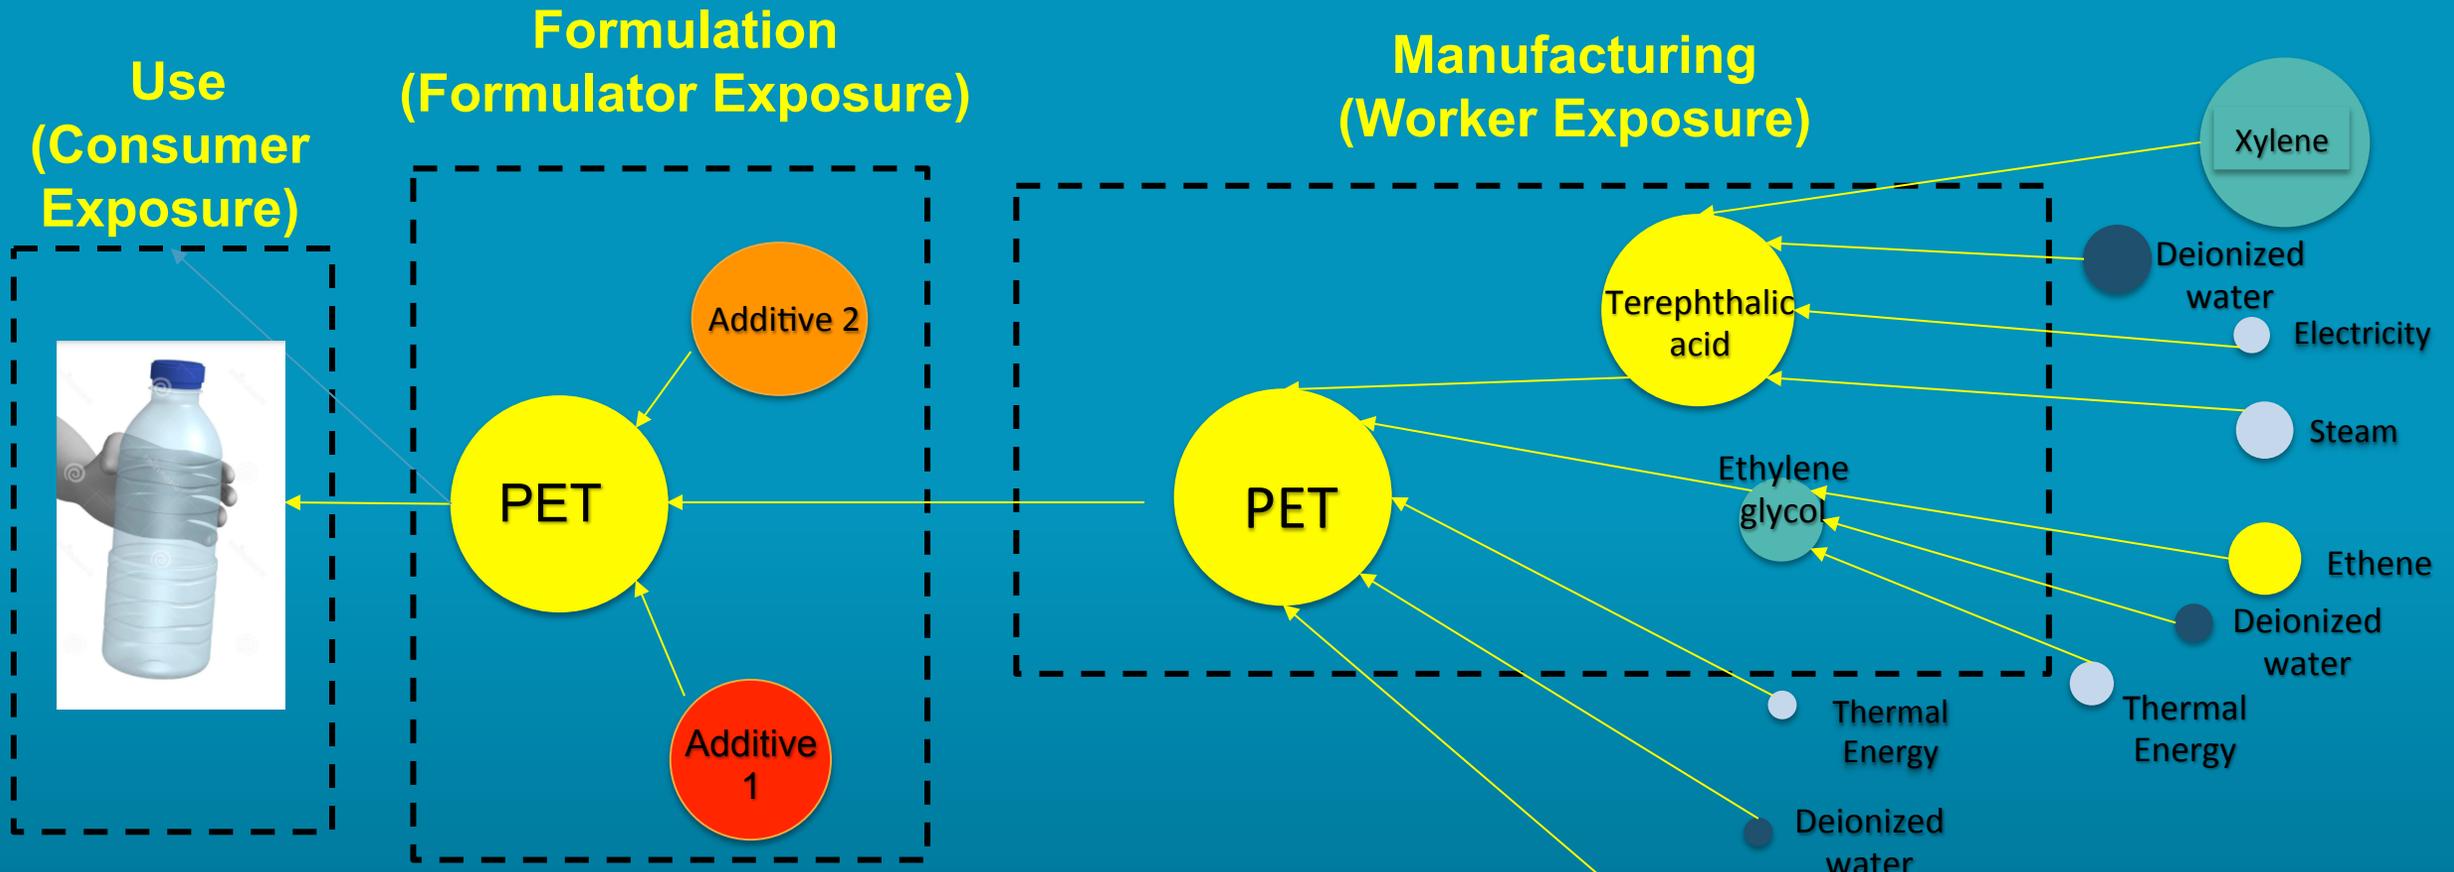

- CHA Empowers Informed Decisions (Replace, Substitute, Redesign)**

Below is an example of a GreenScreen benchmark score distribution in a finished textile treatment formulation

This formulation contains a number of BM1 ingredients that are flagged for substitution because individual chemicals are CMRs and/or PBT, as well as BM U (Hazards Unassignable) chemicals

Challenge #1: Assessing Upstream Impacts by Assessing CHA and Life Cycle Impacts Simultaneously

KEY

Exposure Boundary

Size of Circle: LCA Human Toxicity (bigger=more impact)

Color of Circle: CHA Hazard Score (red/orange/yellow/green: most to least hazardous)

Challenge #2: Assessing Hazards of Mixtures

Northwest Green Chemistry: Choosing Safer Products

Scorecard: Alternatives to Copper-based Antifouling Paints Compares 10 products across 8 variables

- Ingredients were assessed using GreenScreen®
- Scorecard & criteria available on NGC website

Product	How it Works ¹	Apparent Attributes ¹	Use/ Versatility	Unit Cost for Coverage ²	Longevity (months)	Applica Meth
<i>UltraSonic Anti-Fouling</i>	Physical - Sonic technology that prevents attachment	Effective on soft fouling when idle; No chemicals; Solar attachment available	All substrates except wood/ saltwater	\$2.60/sf (up to 32 ft) \$2.35/sf (each add'l 20 ft)	36 +	Inter installa no penetra
<i>Aurora VS 721 Bottom Coat</i>	Release Coating - Bottom wax	Wipe and buff application; Clear barrier coat	All substrates/ all waters	\$0.15/sf	12	Wet spe 2 coo
<i>Seahawk</i>	Biocide - Ecomea; and a proprietary slick anti-	Metal free; Soft growth easily cleaned, removed	All substrates/	\$0.62/sf	12 to 18	Spray, b roll, M

Challenges with Mixtures: Example Zn-Free Marine Bumper

Strategies for Testing:

Whole product testing – “fail fast”

Assess individual ingredients:

No SVHCs?

Weighted average?

GHS/CLP mixture rules?

Other?

Resources for CHA: Lists, Databases, and Software

Databases that Identify Safer Chemicals or CHA/AA Methods

U.S. EPA Safer Chemical Ingredients List (SCIL), CleanGredients, Pharos Material Health Library (37,000+ chemicals), IC2 Chemical Hazards database, CPA's GreenScreen store, TechStreet for GreenScreens, OECD Substitution and Alternatives Assessment Toolbox

Databases that Identify Regulatory, Hazard, Risk, or Exposure-Related Information About a Chemical

- U.S. EPA ChemView database, IC2 Chemical Hazards Database, ChemAdvisor LOLI, OECD e-ChemPortal

Software to Assess Hazards for Human Health and Environmental Endpoints

- U.S. EPA Expo-Box, ECOSAR, T.E.S.T., EPI SUITE, VEGA, QSAR Toolbox, Oncologic, ToxTree

Resources: Organizations Involved in CAA/CHA Activities

- **Green Chemistry and Commerce Council (GC3)**

- Founded in 2005 as part of the Lowell Center for Sustainable Production
- GC3's annual meeting is scheduled May 24-26, 2016 in Burlington, VT
- <http://greenchemistryandcommerce.org/>

- **Northwest Green Chemistry**

- Founded in 2013 by U.S. EPA National Estuary Program
- Identifying safer alternatives and integrating green chemistry and green engineering into new products
- Scorecards, alternatives assessments, QCAT Training
- <http://www.northwestgreenchemistry.org>

- **BizNGO**

- Founded in 2006 by Clean Production Action (CPA)
- BizNGO's annual meeting is December 8-9, 2015 in Boston
- Developed BizNGO CAA Protocol and piloted AA to meet Step 1 of California SCP Regulations
- CPA holds GreenScreen training courses (<http://www.greenscreenchemicals.org/>)
- <http://www.bizngo.org/index.php>

Resources: Finding Completed AA and CHAs

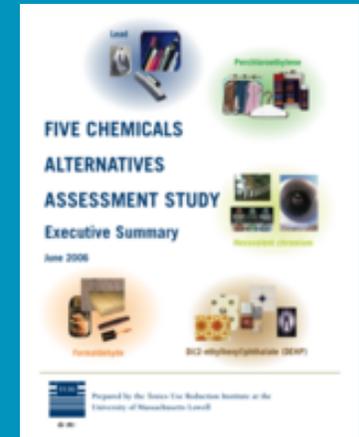

Completed AAs and CHAs are available on-line:

U.S. EPA Alternatives Assessments: Flame Retardants Used in Flexible Polyurethane Foam: An Alternatives Assessment Update and Flame Retardants in Printed Circuit Boards <http://www2.epa.gov/saferchoice/design-environment-alternatives-assessments>

ToxServices LLC. Assessing Alternatives to Copper Antifouling Paint: Piloting the Interstate Chemicals Clearinghouse (IC2) Alternatives Assessment Guide http://theic2.org/alternatives_assessment_guide

Toxic Use Reduction Institute (TURI). 2006. Five Chemicals Alternatives Assessment Study http://www.turi.org/TURI_Publications/TURI_Methods_Policy_Reports/Five_Chemicals_Alternatives_Assessment_Study_2006

The IC2 has GreenScreens and QCAT assessments available: <http://theic2.org/>

Conclusion

Chemical hazard assessment is a critical component of intelligent material design and formulation

- Hazard reduction promotes the design (or re-design) of materials and products that reduce or eliminate the use or generation of hazardous substances
- This is the literal definition of Green Chemistry and benefits the user of the material and the world at large!
